

My partner is a Munich-based start-up consisting of international developers who develop and sell their own storage solution. Among the customers are companies like Riot Games. At the earliest date possible they are looking for a:

Storage Solution developer (backend) (M/F/D)

Job Summary:

We have many ideas and are looking for more hands at our white- and keyboards for the following tasks:

- Planning, developing and improving our software
- Supporting and consulting our clients

Job Requirements:

- Linux experience
- Java/C experience
- Ideally Ceph experience

Nice to have:

- Experience with Kubernetes and Hyperconverged

Soft skills:

- Teamplayer with strong own opinion
- Strong customer orientation
- Fluent written and spoken English
- Reliability, flexibility, and commitment

Education:

For us, it is not that important how and where you got your knowledge. It is more important for us where you stand today and that you want to go further! Be open, have the wish to learn, and bring in new things!

What they offer:

- Full-Remote, worldwide
- Flexible working hours
- Attractive compensation
- An exiting technological environment
- Room for own ideas
- Flat hierarchies
- Amazing team

Are you interested? Then please send me your CV with your start date and salary to:
